OF

A Compleat System of Grammar. Of Letters.

De Literis.

M. What is a Letter?

J. A Letter is the least part of a word, and in the Latine Tongue there are twenty five, to wit, A B C D E F G H I J K L M N O P Q R S T U V X Y Z.

M. But why is not W. named here?

J. Because W. is never written in the Latine Tongue, the sound thereof being supplied by U; as, I perswade.

Altho H be written, it hath not the power of a Letter, being only a note or mark of aspiration.

And K Y Z are not used in purely Latine, but in foreign words only.

M. Why are the Letters written two manner of ways, viz. in great and small Characters?

J. Because with Capital Letters must begin Periods, Proper Names, and also the Names of Arts, Dignities, Feasts, Plays, Offices, Titles, Vices, Vertues, also every Verse, and whatsoever we pay a particular respect unto.

Also the English pronoun I, and the Interjection O, are always written with Capital Letters.

M. What do the Capitals I. H. S. signifie, with points put between them?

J. I. signifies Jesus. S. Stands for The Saviour; and H. of Human Creatures.

M. By what Rule?

J. Because if Capital Letters are thus written alone, or but few together, they either signifie some ancient abbreviature.

Or they signifie proper names, as, C may stand for Charles.

M. Quid est Litera?

J. Litera est minima vocis nota & apud Latinos viginti quinque sunt in usu, viz. a b c d e f g h i j k l m n o p q r s t u v x y z.

M. Quare autem non usum est W?

J. Quia W. linguâ Romanâ non scriptum: sonum ejus per u actum ut, suadeo, (non) swadeo.

Etsi scribitur H, literæ tamen potestatem non habet, quia est nota aspirationis.

K Y Z etiam Latinis dictionibus nunquam admiscuntur, quin peregrinis tantum.

M. Quare Literæ bifariam pinguntur majusculis & minusculis characteribus?

J. Quia majusculis inchoantur periodi, propria etiam nomina, & Artium, Dignitatum Festorum, Ludorum, Officium, Titulorum, Virtutum, Vitium quilibet etiam versus; & quæ magnam habent Emphasin.

Item Pronomen Anglicanum I, & interjectio O, literis majusculis semper pinguntur.

M. Quæ significant I. H. S. cum punctis interpositis?

J. J. Significat Jesus. H. Humanum & S. Salvator.

M. Per quam regulam?

J. Quia si literæ majusculæ ita scribantur solum: vel significant antiquum aliquod compendium.

Vel Prænomina, ut, C pro Carolus.

Or

A Compleat System of Grammar.

Or they signifie Numbers, as I signifies One. X Ten. L Fifty. C a Hundred. D Five Hundred. and M a Thousand, 1698.

M. Why is I in Six VI written on the right hand of the V?

J. Because a lesser Number placed at the right hand of a greater, adds the value of the lesser to the greater.

But if it be placed on the left hand it abates its own value from the greater, as Four IV.

M. How are the letters divided?

J. Into Vowels and Consonants.

M. What is a Vowel?

J. A Vowel is a letter which can make a perfect sound of it self.

M. How many vowels are there?

J. Yes, Diphthongs are made of Vowels.

M. What is a Diphthong?

J. A Diphthong is a two-fold, or double sound of one Syllable.

M. How many Diphthongs are there?

J. There are Eight Diphthongs, namely, æ. ai. au. ei. eu. œ. oi. ui. or yi.

M. Give an Example in æ? Reward.

Give an Example in au? Gold.

Give an Example in ei? Alas.

Give an Example in eu? Europe.

Give an Example in œ? a Supper.

Give an Example in oi? Tray.

Give an Example in ui? a Harpy.

Aut Numeros, ut I. Pro Unus. V. Quinque. X. Decem. L. Quinquaginta. C. Centum. D. Quingenti & M. Mille, ut MDCXCVIII.

M. I. in Sex VI. quare dextrorsum scribitur?

J. Quia minor numerus dextrorsum locatus, quantitatem minoris majori addit.

Sed si finistrorum locetur ejus quantitatem à majore deducit ut, quatuor IV.

M. Quomodo dividuntur literæ?

J. In Vocales & Consonantes.

M. Quid est Vocalis?

J. Vocalis est Litera quæ per se sonum integrum efficere potest.

M. Quot sunt Vocales?

J. Vocales sunt Sex, a. e. i. o. u. y. cæteræ sunt Consonantes.

M. Potestne aliquid componi tantummodo ex Vocalibus sine adminiculo consonantium?

J. Imo ex Vocalibus fiunt Diphthongi.

J. Diphthongus est binus, vel geminus sonus unius Syllabæ.

M. Quot sunt Diphthongi?

Exemplum in ei? Hei.

Exemplum in eu? Europa.

Exemplum in œ? Cœna.

Exemplum in oi? Troia.

Exemplum in ui? Harpia.

M. Now unfold or explain the definition of a Consonant.

J. A Consonant is a Letter which must needs be joined with a Vowel, to make a Sound or Syllable.

M. How are Consonants divided?

J. Consonants are divided into Mutes and half Vowels.

M. How many Mutes are there?

J. Nine, b. c. d. f. g. k. p. q. t.

M. Why are they called Mutes?

J. Because by themselves they are still, and have no proper sound. But when they are pronounced, they seem to have Vowels post-poned.

M. How many half-Vowels are there?

Nine, l. m. n. r. s. x. z. jod. ve, of which l. m. n. r. s. are called liquids, because the sound seems as tho' it were softened and melted.

x. z. j. are double Consonants, because they seem to have the force and power of Two Consonants.

M. Why are they called half Vowels?

J. Because they are Consonants which make a sound by themselves, as tho' a Vowel were præ-poned.

Of Syllables.

M. What is made of the Letters?

J. A Syllable is made of the Letters.

M. What is a Syllable?

J. A Syllable is the discovery of a perfect sound at one motion of the Breath, and may consist of one or more Letters, as, the mind,

M. Explica jam definitionem Consonantis?

J. Consonans est Litera quæ tantum cum vocali syllabam componere potest.

M. Quomodo dividuntur consonæ?

J. Consonantes dividuntur in mutas & semi-vocales.

M. Quot sunt Mutæ?

J. Novem, b. c. d. f. g. k. p. q. t.

M. Quare dicuntur Mutæ?

J. Quia per se obmutescunt, & proprium sonum non habent. Sed dum proferuntur vocales sibi post habitas habere videntur.

M. Quot sunt semivocales?

J. Novem, l. m. n. r. s. x. z. j. v. ex quibus l. m. n. r. s. vocantur liquidæ quia sonus aliquando emollitur, & tanquam liquefit.

x. z. j. duplices sunt consonantes, quia duarum consonantium quasi vim & potestatem habent.

M. Quare dicuntur semi-vocales?

J. Quia consonæ sunt quæ per se sonum efficiunt tanquam vocalis dimidium sonum habent.

De Syllabis.

M. Ex literis quid fit?

J. Ex literis fit syllaba.

M. Quid est syllaba?

J. Syllaba est integri soni comprehensio unius literæ pluriumve spiritus uno motu, ut, a-ni-mus.

M. How do you spell *Josephus*?

J. Jo-se-phus, *Joseph*.

M. Why is it spelt with J. not

G.

J. Because G sounds hard before a, o, u, like the Greek Letter Gamma.

M. Why is *Jose-phus* spelt with ph, (not) *Jose-fus* with an f?

J. Because ph always sounds like f, and ch like k.

M. Why *Jo-sephus* (not) *Josephus*?

J. Because a Consonant set between two Vowels, belongs to the following Vowel, and begins that syllable, but x belongs to the former.

M. Why do you write *Generosus*, a Gentleman, with G not with J?

J. Because G before e i y sounds soft like the Hebrew letter jod.

M. How do you spell *annus* a Year?

J. *An-nus*. M. By what rule?

J. If the same consonant be doubled, the first ends the former, and the latter begins the following syllable.

M. How are the letters divided in *Princeps* a *Prince*?

J. Prin-ceps (not) princ-eps, because consonants which cannot be joined in the beginning of a word must be parted in the middle.

M. How do you spell *tristis* sad?

J. *Tri-stis* (not) *tris-tis*, because consonants which can be joined in the beginning of a word, must not be parted in the middle.

M. Rehearse a Catalogue then of those consonants which happening together must never be parted?

M. *Josephus* quomodo literas formas? J. *Jo-se-phus*.

M. *Josephus* cum J (non) G quare?

J. Quia G ante a o u duriter sonat sicut Gamma Græce, ut Gallus.

M. Quare *Josephus* cum ph (non) *Jose-fus* cum f?

J. Quia ph sicut f semper sonat, & ch sicut k.

M. Quare *Jo-sephus* (non) *Josephus*?

J. Quia consona inter duas vocales posita ad posteriorem pertinet, x vero ad priorem syllabam spectat.

M. Quare scribis *Generosus* cum G (non) *Jenerosus* cum J.

J. Quia G ante e i y mollitur sonat sicut jod Hebræorum.

M. *Annus*, quomodo literas formas?

J. *An-nus*. M. Quâ regulâ?

J. Si consona geminetur prior ad priorem, & posterior ad posteriorem syllabam attinet.

M. *Princeps* unde dividuntur literæ?

J. Prin-ceps (non) princ-eps; quia consonantes quæ in principio dictionis sociari non possunt, nec in medio conjugantur.

M. *Tristis* unde formantur literæ?

J. Tri-stis (non) Tris-tis, quia consonantes quæ principio dictionis conjungi possunt in medio etiam connectuntur.

M. Recita igitur Catalogum earum consonantium quæ nunquam sunt seperandæ?

J. Yes withal my heart.

Some of these may seem uncouth to the English, yet Authority justifies them, however Use or Custom may prevail to the contrary.

In the English dw, sw, tw.

M. Why *ad-est* he is here (not) a-deft.

J. Because in words compounded, that part compounding, and the part compounded, must be parted.

M. Why is *cor*, the heart, writ with c not k?

J. Because c before a o u sounds like k, and before e i y it is every where sounded like f, with a hissing as, sure, meat, a Swan.

M. Why is *lectio* a lesson, writ with tio (not) xio, cfo nor ccio?

J. Because ti before a vowel usually sounds like si.

M. Doth ti found every where like si when a vowel follows?

J. No, for it keeps its own proper sound in Greek words made Latine, as, Government.

Also when ti begins a word, it keeps its own sound, as, a turbant.

Also in paragogical infinitives, as, to be sent.

Also when f goes immediately before t, as, a question.

And in vitium, the Genitive Case plural from vitis a vine, to distinguish it from vitium vice.

M. Why, do you write audacia with cia (not) fia, nor yet with tia?

J. Because derivative words are spelt with the same letters which their primitives are.

M. From whence is audacia derived?

J. From audax, audacis, bold.

J. Ego vero ac lubens.

bl, bd, br, ch, cl, cm, cn, cr, cf, dr, dm, fl, fr, gl, gn, gr, kn, mn, ph, phth, pl, pr, pf, pt, rh, sc, scr, sh, sk, sl, sm, sn, sp, sph, spl, spr, sq, st, str, th, thr, tl, tm, tn, tr, & Anglice dw, sw, tw.

M. Ad-est (non) a-deft quare?

J. Quia in compositis dictionibus pars singula ex altera est separanda.

M. Cor cum c (non) k quare?

J. Quia c ante a o u sicut k, sonat & ante e i y tanquam f, cum sibilo ubique proferetur, ut, certus, cibus, cygnus.

M. Quare lectio scribitur cum tio (non) cum xio, nec cfo, neq; ccio?

J. Quia ti sequente vocali ferè sonat sicut si.

M. Sonatne ti ubique tanquam si dum sequeretur vocali?

J. Non, nam retinet proprium suum sonum in Græcis dictionibus ut, Politia.

In principio etiam dictionis, ut, tias.

Item Infinitivis paragogicis, ut, mittier pro mitti.

Similiter quando f, præponitur t, ut, quæstio.

Et in Genitivo vitium à vitis distinctionis gratià à Nominativo vitium.

M. Quare scribis audacia cum cia (non) cum fia, nec tia?

J. Quia derivativa ad enndum modum primitivorum suas literas formant.

M. Audacia unde dicitur?

J. Audacia derivatur ex audax, audacis.

J. When two verbs come together with (to) between them, the latter is put into the Conjunctive Mood; with ut, that, provided one of them be, &c. to beware, to advise, to desire, to do, to exhort, to warn, to pray, to ask, or their compounds, as,

I desire you to have a care.

Exempli gratia.

Verbi Gratia.

M. Quare dicis non dubito quin hoc intelligas?

J. Conjunctiones ut, quo, quin Conjunctivum adsciscunt; etsi præsens vel futurum præcedit

and if a present or future tense went before, the present tense of the Conjunctive follows; but if the preter tense go before the imperfect tense of the conjunctive follows.

M. Why do you say, &c. what are you doing? see what you do.

J. Because Interrogatives when they demand, require to be put into the Indicative Mood, but when they do not ask a question, the conjunctive.

M. Why do you say, &c. I am glad because thou art come. I have written that thou mightest come? The difference between quod and ut is required, they both signifying (that)?

J. The conjunction (that) coming between two Verbs, (that) is cast away; and with an accusative case set before (which might be resolved into a nominative, to come before that verb) the latter is put into the Infinitive Mood, as,

I hear that thou art a diligent Boy.

I hope that I shall be loved by you.

To this infinitive mood belongs three Gerunds ending in di, do, dum. Also two Supines, ending in um and u; and Participles, whereof we will treat in their proper place.

Gerunds, Supines and Participles, require or govern the same case those verbs do from whence they come. Gerunds want the plural.

M. Why do you say, it is time to breakfast (not)?

J. The latter verb signifying the present tense of the infinitive mood active, is made by the Gerund in di, provided between those verbs be put, &c. love, cause, custom, counsel, desire, end.

Audio te esse puerum diligentem.

Spero me amatum iri a vobis.

Huic modo infinitivo appendent tria Gerundia in di do dum, finita. Duo etiam Supina in um & u. Item Participia de quibus suo loco.

Gerundia, Supina & Participia, regunt casus suorum verborum. Gerundia carent plurali.

M. Quare dicis tempus est jentandi (non) jentare?

He is skilful to write (not)

He is sure to go because he hath a desire to see.

M. Why do you say, by writing you will learn to write (not)? or you will learn to write by writing?

Slothful Boys are soon discouraged from Learning.

M. Why do you say, I came to ransom or redeem thee (not)?

J. Gerunds in dum follows verbs, but are governed or depend on Prepositions governing the accusative case; and they signify either the infinitive mood active, or the participle of the present tense, as,

Be ye merry at Supper-time.

A most large place to plead in.

But if necessity be signified, the Gerunds in dum are put absolute, (that is, they are governed of nothing) the verb est being added, which is sometimes expressed, and sometimes understood, as, I must go hence (not).

We must pray that there may be a sound mind in a sound body.

M. How came you indifferently to say, I am going to Supper? &c.

Of the Figures belonging to Syntax.

M. How many figures belong to Syntax.

J. Four, Pleonasm, Syllepsis, Hyperbaton and Ellepsis.

Pleonasm is when there is a word in a sentence more than needs as; *I have heard it with these Ears. I have seen it with these Eyes. I have spoken it with this Mouth.* Syllepsis or Synthesis is when there is an agreement in Sence but not in Words: Or it is the comprehension of the unworthy under the more worthy as; *both you and the Boy were: The King and the Queen are blessed.* Hyperbaton, is when the Latines imitate a Greek construction, or change the order of words as; *me-cum for cum me with me. Things set on fire above these: Ellepsis is when any Word is left out in a Sentence that ought to be there to compleat the Sence. The thing moveable is made substantial. Whereas if it be fixed you may understand it as; They say it is not in paying. What things more, what those men.*

Rules for construing according to natural Order.

BEFORE you Construe read the Sentence distinctly to a Period, observing, 1. Points. 2. Proper-names. 3. Words included in a Parenthesis. 4. Argument and drift of the Place. 5. Circumstances, Quis, Cui, Causa, Locus, quo Tempore, Prima, Sequela *i. e.* who speaks in that place, what is spoken, to whom it is spoken, upon what occasion, to what end it is spoken, where it was spoken, and at what time, what went immediatly before, and what follows next after. 6. Observe the principal Verb with its nominative Case. Then Construe, 1. vocative Case (if there be any) with its Interpretation, and whatsoever depends on it.

2. Take the nominative Case (of the principal Verb) or whatsoever is put instead of it, and joyn with it whatsoever depends on it.

3. Take the principal Verb and whatsoever depends on it.

4. Take the Case following the Verb, and after it all other Cases in order, as the Genitive, Dative, Ablative.

But Relatives and Nouns that follow the Rule of the Relative, together with their Substantives (if any be expressed) are commonly taken before the Verb, or any other Word whereof they are governed; and so are Conjunctions and Adverbs of likeness as *ut, sicut, having sic, or ita* to answer them in the second Part of the Sentence.

5. Take the Verb and Adverb together, and Substantive and Adjective together, unless the Adjective pass over its Signification unto some other Word which it governs.

6. Observe Indeclinables, and the Case (they required) following.

7. The Substantive with its Participle, which neither agrees with Verb, nor is governed of any Word, and being put in a Comma by it self is called the Ablative Case Absolute.

8. Observe that Gerunds accord to the Oblique Cases of Nouns, *di to the Genitive, do to the Ablative, dum to the Accusative* and Supines are put for Infinitive Moods.

Summa Regula.

1. *Distio regens præponenda ei quæ regitur.*
Quæ declarant postponenda sunt iis quæ declarantur.
 The word governing Construe before the word governed.
 And those things which declare, must be taken after those things which are declared.

Rules

Rules for placing Words according to artificial Order.

1. **O**BERVE that contrary to Gramatical Order of construction on words governed, commonly precede, or are placed before words governing, and in perfect Sentences, Oblique Cases are usually put in the beginning; unless they be Negatives and then they are elegantly placed at the end: And so may Adjectives, and Participles which contain the Emphasis or cheif Point of the Sence.

The Patient also must follow the Agent.

The Nominative Case must be placed in the middle before the Verb: But if a question be asked, or the Verb be of the Imperative Mood it is put after the Verb.

Adjectives usually before the Substantive, and between them place the Genitive Case of the latter two Substantives and the word governing that Genitive Case, or the Verb, Adverb, Preposition and their Cases, yet these last may be placed where they best please the Ear, tho' elegancy require them to stand before the Verb or Participle which they declare.

Both in Prose and Verse sweetly dispose long Syllables with short ones, especially in the ending of Sentences.

Always avoid Confusion of the Words of one Clause with the Words of another, with harshness of Sound and affected Curiosity; ever keeping up the best advantages of dependance, variety, distinction: perspicuity and smoothness of Stile.
